

A METHOD AND SYSTEM FOR EFFECT ADDITION IN VIDEO EDITION

ABSTRACT

5 A method and system for effect addition in video edition is disclosed. Firstly, one or more video clips are selected and arranged. The selected video clips are scanned by scene scanning to generate effect marking-in points. Then effects can be added on the effect marking-in points according to a default effect type and its default
10 duration. This will be convenient for user to proceed the video edition afterward.
